GC US Gold Export UK YoY Z

First estate Z consuming the data source. The East-West gold flow tell (GC-E2/E3 personas) that peaked at record 10 billion dollars in Jan 2025 EFP squeeze.

David Stendahl · Market Lab Analytics · November 7, 2026

What this signal is

First estate Z consuming the data source. The East-West gold flow tell (GC-E2/E3 personas) that peaked at record 10 billion dollars in Jan 2025 EFP squeeze.

The composite is bounded between minus one and plus one through tanh. On 2024-06-17 it reached its series maximum plus 0.990 and on 2023-06-28 its series minimum minus 0.609.

Today the composite reads near +0.00. See live page for current state.

How the inputs compose

First estate Z consuming the data source. The East-West gold flow tell (GC-E2/E3 personas) that peaked at record 10 billion dollars in Jan 2025 EFP squeeze.

The engine also computes four confirming features: five-day velocity, 60-day volatility regime, 60-day correlation with gold returns, 63-day lag-1 autocorrelation.

• • •

What the state-conditional returns have actually done

The gold forward-60-day return baseline (unconditional) is mean plus 0.74 percent, median plus 0.04 percent.

> **Reference baseline (9,209 gold-aligned forward-60-day windows over the live engine window)**
>
> Gold forward-60-day return baseline: mean plus 0.74 percent, median plus 0.04 percent. Phase 0 source: Z102073 engine parquet joined with COMEX gold back-adjusted continuous closes.

UK gold exports surging (Phase +1), 170 trading days, returned on average plus 2.46 percent.

Normal (Phase +0), 6,784 trading days, returned on average plus 0.67 percent.

UK gold exports weak (Phase −1), 1,705 trading days, returned on average plus 0.47 percent.

• • •

Three cases that frame how to read the signal

Case 1: 2024-06 composite series maximum

On 2024-06-17 the composite reached its series maximum plus 0.990. Gold subsequent 60-day behavior aligned with the uk gold exports surging regime pattern.

Case 2: 2023-06 composite series minimum

On 2023-06-28 the composite reached its series minimum minus 0.609. Gold subsequent 60-day behavior aligned with the uk gold exports weak regime pattern.

Case 3: March 2020 COVID shock window

The March 2020 COVID liquidity shock drove violent regime shifts across gold drivers. The composite oscillated as the underlying mechanism repriced.

• • •

How to use the signal today

This is a regime detector on a 60-day forward horizon.

Three best uses. First, as a regime filter for gold exposure (Phase +1 equals uk gold exports surging). Second, as a cross-check against positioning and price-momentum signals. Third, as a transition-window warning, pairing with price-based signals for conviction.

• • •

Methodology notes

First estate Z consuming the data source. The East-West gold flow tell (GC-E2/E3 personas) that peaked at record 10 billion dollars in Jan 2025 EFP squeeze.

The 1989 start reflects the earliest reliable source coverage.

• • •

What this signal does not cover

Four caveats. The signal is a regime detector, not a timing signal. State-conditional means hold on average, not for every individual window. Regime persistence varies with macroeconomic backdrop. Individual windows can run much longer or shorter than mean sample. State-conditional edges are backward-looking empirical averages. Future regimes may differ. The baseline is COMEX gold back-adjusted continuous (GC_1240BD).

Not investment advice. Signal readings and empirical statistics are derived from publicly available data sources. (c) 2026 David Stendahl.
