GC US Gold Import HK YoY Z

HK is the primary China gold arbitrage conduit. Complements a sibling signal (US to UK exports).

David Stendahl · Market Lab Analytics · November 6, 2026

What this signal is

HK is the primary China gold arbitrage conduit. Complements a sibling signal (US to UK exports).

The composite is bounded between minus one and plus one through tanh. On 2021-04-21 it reached its series maximum plus 0.578 and on 2014-01-27 its series minimum minus 0.929.

Today the composite reads near +0.00. See live page for current state.

• • •

How the inputs compose

HK is the primary China gold arbitrage conduit. Complements a sibling signal (US to UK exports).

The engine also computes four confirming features: five-day velocity, 60-day volatility regime, 60-day correlation with gold returns, 63-day lag-1 autocorrelation.

• • •

What the state-conditional returns have actually done

The gold forward-60-day return baseline (unconditional) is mean plus 0.74 percent, median plus 0.04 percent.

> **Reference baseline (9,208 gold-aligned forward-60-day windows over the live engine window)**
>
> Gold forward-60-day return baseline: mean plus 0.74 percent, median plus 0.04 percent. Phase 0 source: Z102150 engine parquet joined with COMEX gold back-adjusted continuous closes.

HK imports surging (Phase +1), 1,455 trading days, returned on average plus 1.65 percent.

Normal (Phase +0), 6,789 trading days, returned on average plus 0.64 percent.

HK imports weak (Phase −1), 215 trading days, returned on average minus 3.18 percent.

• • •

Three cases that frame how to read the signal

Case 1: 2021-04 composite series maximum

On 2021-04-21 the composite reached its series maximum plus 0.578. Gold subsequent 60-day behavior aligned with the hk imports surging regime pattern.

Case 2: 2014-01 composite series minimum

On 2014-01-27 the composite reached its series minimum minus 0.929. Gold subsequent 60-day behavior aligned with the hk imports weak regime pattern.

Case 3: March 2020 COVID shock window

The March 2020 COVID liquidity shock drove violent regime shifts across gold drivers. The composite oscillated as the underlying mechanism repriced.

• • •

How to use the signal today

This is a regime detector on a 60-day forward horizon.

Three best uses. First, as a regime filter for gold exposure (Phase +1 equals hk imports surging). Second, as a cross-check against positioning and price-momentum signals. Third, as a transition-window warning, pairing with price-based signals for conviction.

• • •

Methodology notes

HK is the primary China gold arbitrage conduit. Complements a sibling signal (US to UK exports).

The 1989 start reflects the earliest reliable source coverage.

• • •

What this signal does not cover

Four caveats. The signal is a regime detector, not a timing signal. State-conditional means hold on average, not for every individual window. Regime persistence varies with macroeconomic backdrop. Individual windows can run much longer or shorter than mean sample. State-conditional edges are backward-looking empirical averages. Future regimes may differ. The baseline is COMEX gold back-adjusted continuous (GC_1240BD).

Not investment advice. Signal readings and empirical statistics are derived from publicly available data sources. (c) 2026 David Stendahl.
