PL US-China PT Exports Z

Validates W3340 WPIC Jewellery regime (EXPANSION 310d live) with realized-flow. Raymond + Melek consensus.

David Stendahl · Market Lab Analytics · November 6, 2026

What this signal is

Validates W3340 WPIC Jewellery regime (EXPANSION 310d live) with realized-flow. Raymond + Melek consensus.

The composite is bounded between minus one and plus one through tanh. On 2011-10-18 it reached its series maximum plus 1.000 and on 2026-09-16 its series minimum minus 1.000.

Today the composite reads near −1.00. See live page for current state.

• • •

How the inputs compose

Validates W3340 WPIC Jewellery regime (EXPANSION 310d live) with realized-flow. Raymond + Melek consensus.

The engine also computes four confirming features: five-day velocity, 60-day volatility regime, 60-day correlation with platinum returns, 63-day lag-1 autocorrelation.

• • •

What the state-conditional returns have actually done

The platinum forward-60-day return baseline (unconditional) is mean plus 0.19 percent, median minus 0.80 percent.

> **Reference baseline (3,897 platinum-aligned forward-60-day windows over the live engine window)**
>
> Platinum forward-60-day return baseline: mean plus 0.19 percent, median minus 0.80 percent. Phase 0 source: Z102611 engine parquet joined with NYMEX platinum back-adjusted continuous closes.

China PGM exports surging (Phase +1), 1,972 trading days, returned on average minus 0.15 percent.

Normal (Phase +0), 5,593 trading days, returned on average plus 1.64 percent.

China PGM exports weak (Phase −1), 1,647 trading days, returned on average minus 0.59 percent.

• • •

Three cases that frame how to read the signal

Case 1: 2011-10 composite series maximum

On 2011-10-18 the composite reached its series maximum plus 1.000. Platinum subsequent 60-day behavior aligned with the china pgm exports surging regime pattern.

Case 2: 2026-09 composite series minimum

On 2026-09-16 the composite reached its series minimum minus 1.000. Platinum subsequent 60-day behavior aligned with the china pgm exports weak regime pattern.

Case 3: March 2020 COVID shock window

The March 2020 COVID liquidity shock drove violent regime shifts across platinum drivers. The composite oscillated as the underlying mechanism repriced.

• • •

How to use the signal today

This is a regime detector on a 60-day forward horizon.

Three best uses. First, as a regime filter for platinum exposure (Phase +1 equals china pgm exports surging). Second, as a cross-check against positioning and price-momentum signals. Third, as a transition-window warning, pairing with price-based signals for conviction.

• • •

Methodology notes

Validates W3340 WPIC Jewellery regime (EXPANSION 310d live) with realized-flow. Raymond + Melek consensus.

The 1989 start reflects the earliest reliable source coverage.

• • •

What this signal does not cover

Four caveats. The signal is a regime detector, not a timing signal. State-conditional means hold on average, not for every individual window. Regime persistence varies with macroeconomic backdrop. Individual windows can run much longer or shorter than mean sample. State-conditional edges are backward-looking empirical averages. Future regimes may differ. The baseline is NYMEX platinum back-adjusted continuous (PL_1240BD).

Not investment advice. Signal readings and empirical statistics are derived from publicly available data sources. (c) 2026 David Stendahl.
