PL LBMA Vault Gold YoY Z

PGMs benefit from precious-metal backdrop even without industrial theme.

David Stendahl · Market Lab Analytics · November 6, 2026

What this signal is

PGMs benefit from precious-metal backdrop even without industrial theme.

The composite is bounded between minus one and plus one through tanh. On 2017-07-05 it reached its series maximum plus 0.997 and on 2021-10-04 its series minimum minus 0.996.

Today the composite reads near +0.94. See live page for current state.

• • •

How the inputs compose

PGMs benefit from precious-metal backdrop even without industrial theme.

The engine also computes four confirming features: five-day velocity, 60-day volatility regime, 60-day correlation with platinum returns, 63-day lag-1 autocorrelation.

• • •

What the state-conditional returns have actually done

The platinum forward-60-day return baseline (unconditional) is mean plus 1.57 percent, median minus 0.06 percent.

> **Reference baseline (2,290 platinum-aligned forward-60-day windows over the live engine window)**
>
> Platinum forward-60-day return baseline: mean plus 1.57 percent, median minus 0.06 percent. Phase 0 source: Z85272 engine parquet joined with NYMEX platinum back-adjusted continuous closes.

LBMA vault gold rising (Phase +1), 1,285 trading days, returned on average plus 2.94 percent.

Normal (Phase +0), 7,066 trading days, returned on average plus 0.63 percent.

LBMA vault gold declining (Phase −1), 861 trading days, returned on average minus 0.39 percent.

• • •

Three cases that frame how to read the signal

Case 1: 2017-07 composite series maximum

On 2017-07-05 the composite reached its series maximum plus 0.997. Platinum subsequent 60-day behavior aligned with the lbma vault gold rising regime pattern.

Case 2: 2021-10 composite series minimum

On 2021-10-04 the composite reached its series minimum minus 0.996. Platinum subsequent 60-day behavior aligned with the lbma vault gold declining regime pattern.

Case 3: March 2020 COVID shock window

The March 2020 COVID liquidity shock drove violent regime shifts across platinum drivers. The composite oscillated as the underlying mechanism repriced.

• • •

How to use the signal today

This is a regime detector on a 60-day forward horizon.

Three best uses. First, as a regime filter for platinum exposure (Phase +1 equals lbma vault gold rising). Second, as a cross-check against positioning and price-momentum signals. Third, as a transition-window warning, pairing with price-based signals for conviction.

• • •

Methodology notes

PGMs benefit from precious-metal backdrop even without industrial theme.

The 1989 start reflects the earliest reliable source coverage.

• • •

What this signal does not cover

Four caveats. The signal is a regime detector, not a timing signal. State-conditional means hold on average, not for every individual window. Regime persistence varies with macroeconomic backdrop. Individual windows can run much longer or shorter than mean sample. State-conditional edges are backward-looking empirical averages. Future regimes may differ. The baseline is NYMEX platinum back-adjusted continuous (PL_1240BD).

Not investment advice. Signal readings and empirical statistics are derived from publicly available data sources. (c) 2026 David Stendahl.
